Monitoring Data Record

Project Title: R-3427 (US 601 Widening) COE Action ID: 200421361 & 200421362						
Canada Namada HT Day Day ala (Cita ()						
Stream Name: UT Dry Branch (Site 6) DWQ Number: 3403						
City, County and other Location Information: <u>US 601, Yadkin County (64+20-66+08)</u>						
Date Construction Completed: Water turned 7-27-06 & Reforestation completed 3-10-06						
Monitoring Year: (1) of 5						
Ecoregion: 8 digit HUC unit 03040101						
USGS Quad Name and Coordinates:						
Rosgen Classification:						
Length of Project: 220' Urban or Rural: Rural Watershed Size:						
Monitoring DATA collected by: M. Green, P. Allen, J. Lancaster Date: 8/22/07						
Applicant Information:						
Name: NCDOT Roadside Environmental Unit						
Address: 1425 Rock Quarry Road Raleigh, NC 27610						
Telephone Number: (919) 861-3772 Email address: mlgreen@dot.state.nc.us						
Consultant Information:						
Name:						
Address:						
Telephone Number: Email address:						
Project Status: Complete						
Monitoring Level required by COE and DWQ (404 permit/ 401 Cert.): Level (1/2) 3						
Monitoring Level 1 requires completion of Section 1, Section 2 and Section 3						
Permit States: NCDOT shall perform the following components of Level I monitoring twice						
each year for the 5 year monitoring period (summer and winter): Reference photos, plant						
survival, and visual inspection of channel stability. If less than two bankfull events occur during						
the first 5 years, NCDOT shall continue monitoring until the second bankfull event is						
documented. The bankfull events must occur during separate monitoring years. In the event that						
the required bankfull events do not occur during the 5 year monitoring period, the USACE, in						
consultation with resource agencies, may determine that further monitoring is not required.						
Continual DIJOTO DECEDENCE CITES						
Section 1. PHOTO REFERENCE SITES (Manitoring at all levels must complete this section)						
(Monitoring at all levels must complete this section)						
(Monitoring at all levels must complete this section)						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site:						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations.						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site:						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations.						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations. Dates reference photos have been taken at this site: 1/6/07, 8/22/07						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations.						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations. Dates reference photos have been taken at this site: 1/6/07, 8/22/07 Individual from whom additional photos can be obtained (name, address, phone):						
(Monitoring at all levels must complete this section) Total number of reference photo locations at this site: A total of 8 photos were taken from 3 photo point locations. Dates reference photos have been taken at this site: 1/6/07, 8/22/07						

Section 2. PLANT SURVIVAL Attach plan sheet indicating reference photos.
Identify specific problem areas (missing, stressed, damaged or dead plantings):
Estimated causes, and proposed/required remedial action:
ADDITIONAL COMMENTS: <u>Streambank reforestation was completed on 3/10/06.</u> Due to low survival rates of bareroot seedlings the site was replanted on 1/6/07. Planted vegetation is surviving and includes black willow, silky dogwood, green ash, river birch, and sycamore. Other vegetation noted on site includes goldenrod, woolgrass, <i>Juncus</i> sp., <i>Sagittaria</i> sp., cattail, kudzo, <i>Scirpus</i> sp., horse-neetle, and various grasses.

If required to complete Level 1 and Level 2 monitoring <u>only</u> stop here; otherwise, complete section 3.

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. <u>Physical measurements of channel stability/morphology will not be required.</u> Include a discussion of any deviations from as-built and an evaluation of the significance of these deviations and whether they are indicative of a stabilizing or destabilizing situation.

Stream is highly stabilized for the year one summer evaluation. All cross vanes are functioning properly and streambanks are stabilized with heavy herbaceous vegetation.

erosion					
present?					
Other					
problems					
noted?					

NOTE: Attach separate narrative sheets to each monitoring report describing/discussing the overall monitoring results. Include the identification of specific problem areas/channel failures, estimated cause and proposed/required remedial action. This should include a brief discussion of any parameter that has changed significantly from as-built.
